

CI LIQUID ALTERNATIVE INVESTMENT STRATEGIES

CI Marret Alternative Enhanced Yield Fund

JUNE 2021

CI Marret Alternative Enhanced Yield Fund (the Fund) seeks to provide income with low volatility regardless of market conditions. The Fund invests primarily in fixed income across the credit spectrum including cash and cash equivalents. The Fund's active management targets low correlation with both equity and traditional fixed income.

PERFORMANCE SUMMARY (as of June 30, 2021)

| | 1 MONTH | 3 MONTHS | 6 MONTHS | YTD | 1 YEAR | SINCE INCEPTION |

GLOBAL MACRO UPDATE

Risk markets posted strong gains in June, despite some mid-month volatility surrounding the Federal Reserve's (the "Fed") policy meeting. Yields on longer-term Treasuries continued to fall over the course of the month, providing a tailwind for equities and credit. Investors became more comfortable that inflation will soon peak and indeed be transitory. However, interest rates did show some volatility across the curve as the Fed surprised markets with a more "hawkish" tone. Not only was there finally clear acknowledgement of a strengthening economy and an expectation of persistently improving labour conditions, but committee members also pulled forward their anticipation of lift-off as shown on their dot plot. This surprise initially led to selling across the curve, with most pressure seen in the belly, as 5-year Treasury yields adjusted higher to account for the Fed Funds rate rising sooner than expected. Longer-term Treasuries, however, started to rally shortly thereafter, as the central bank was now seen to be responsible once again, providing a clear message that they would act rationally and remove liquidity as required when the economy and jobs recover. After some initial turbulence, risk markets responded positively as well. The S&P 500 composite index advanced to new record highs, while investment grade spreads rallied to fresh cycle lows. High yield performed well, however, trailed investment grade, given the strong move higher in longer dated government bonds.

POSITIONING UPDATE

The Fund generated gains this month while its benchmark suffered losses. Its outperformance was primarily due to its favourable asset mix as longer duration higher quality credit performed strongly while short duration Canadian credit had negative returns. Importantly, the Fund also produced positive returns for the first half of 2021 in a difficult fixed income environment, significantly outperforming its benchmark which suffered losses year to date. We're maintaining our core exposure in credit, primarily high yield, given a firm economic backdrop, improving credit fundamentals and significant policy support. We expect volatility to remain benign in the very near term given range-bound interest rates for now as inflation expectations have stabilized. While this environment remains supportive for credit, we are also cognizant of the fact that credit spreads have narrowed considerably, and valuations are becoming quite full. Strong overseas buying of investment grade has pushed spreads through their tightest levels of 2018 and left them only a few basis points off their all-time tight, set in the early 2000s when duration was lower and credit quality was higher. The carry per unit of risk appears to have never been worse. While high yield spreads are still above their all-time lows, all-in yields have fallen to their lowest levels in history, leaving little upside in a market trading at a premium to par and given the call constrained nature of the market. Lower-quality credit performed well this year, benefitting from ample liquidity and the reopening of the economy. While it offers a bit more carry, we feel it provides inadequate compensation for any uptick in default risk as the cycle matures. Accordingly, we have focused on maintaining our core exposure in higher-quality high yield credit in order to participate with the tailwinds of the current environment. We have continued to more meaningfully reduce our exposure to investment grade given valuation, with a bias to also begin reducing high yield as well. We expect our credit exposure to continue to fall over the coming quarters commensurate with the fall in spreads.

OUTLOOK

Looking forward, it appears that the market is becoming increasingly confident in its view of a "goldilocks" environment persisting. Interest rate volatility has been the dominant risk factor for most markets this year and it has been steadily declining since March. While accelerating growth destabilized rates earlier this year, the rate of improvement in growth has clearly started to slow, giving the bond market comfort that peak growth is behind us. Worries shifted to inflation after CPI registered its highest monthly level since 2008 and core CPI posted its highest reading in decades. However, with the Fed clarifying the committee's new reaction function under the AIT (average inflation

targeting) framework, the main message was clear: don't bet on the Fed being irrationally easy if inflation expectations rise further. With peak growth behind us and the prospect of inflation peaking soon, excess cash has pushed up valuations in most markets to levels previously unseen. While caution has not been rewarded in this recovery, one underestimated risk, in our view, is peak liquidity. While fundamentals have improved considerably, much of the improvement has been driven by accommodative monetary and fiscal policy. With a responsible Fed now acknowledging the outlook for a sustained improvement in the economy, ***good news may start to become bad news***. As easily as markets have moved to record highs with cash flowing into the system, a withdrawal of extremely accommodative monetary policy will be a headwind to markets going forward. While we are currently positioned to participate in the low volatility environment, we are slowly starting to reduce risk across markets. We are watching employment data very closely because we expect improving jobs data over the coming months to bring volatility back into markets, as the prospect of tapering and tightening becomes more of a reality. Additionally, we are keeping a close eye on inflation trends to see if they moderate as the market anticipates. Our internal research shows that core inflation is likely to remain stubbornly high. Any persistence in inflation above expectations will likely disrupt the current low volatility environment. As always, we will look to take advantage of tactical opportunities that may present themselves across all markets over the coming quarter as expected volatility resurfaces.

GLOSSARY OF TERMS

Duration: A measure of the sensitivity of the price of a fixed income investment to a change in interest rates. Duration is expressed as number of years. The price of a bond with a longer duration would be expected to rise (fall) more than the price of a bond with lower duration when interest rates fall (rise).

Correlation: A statistical measure of how two securities move in relation to one another. Positive correlation indicates similar movements, up or down, while negative correlation indicates opposite movements (when one rises, the other falls).

Leverage: An investment strategy of using borrowed money - specifically, the use of various financial instruments or borrowed capital - to increase the potential return of an investment.

Liquidity: The degree to which an asset or security can be quickly bought or sold in the market without affecting the asset's price. Cash is considered to be the most liquid asset, while things like fine art or rare books would be relatively illiquid.

Volatility: Measures how much the price of a security, derivative, or index fluctuates. The most commonly used measure of volatility when it comes to investment funds is standard deviation.

IMPORTANT DISCLAIMERS

Commissions, trailing commissions, management fees and expenses all may be associated with an investment in mutual funds and exchange-traded funds (ETFs). Please read the prospectus before investing. Important information about mutual funds and ETFs is contained in its respective prospectus. Mutual funds and ETFs are not guaranteed; their values change frequently, and past performance may not be repeated. You will usually pay brokerage fees to your dealer if you purchase or sell units of an ETF on recognized Canadian exchanges. If the units are purchased or sold on these Canadian exchanges, investors may pay more than the current net asset value when buying units of the ETF and may receive less than the current net asset value when selling them.

CI Liquid Alternative investment funds have the ability to invest in asset classes or use investment strategies that are not permitted for conventional mutual funds. The specific strategies that differentiate these investment funds from conventional fund structure include: increased use of derivatives for hedging and non-hedging purposes; increased ability to sell securities short; and the ability to borrow cash to use for investment purposes. While these strategies will be used in accordance with the investments funds' investment objectives and strategies, during certain market conditions they may accelerate the pace at which your investment decreases in value.
